module One

Class 06

IF AND ELSE

used to control the flow of your program

if a == b:

    print("true")

indentation is a 5 space block used to write inside if and else

Pass is used when you don't want to write anything inside

else is the final stop

else will not accept any conditions

ternary operator

    "even" if a %2 == 0 else "odd"

ELIF statement

when you want to use multiple conditions

if elif ladder

if (condition):

elif (condition):

elif (condition):

else:

using logical operators

major usage of conditional and logical

A = 12 , B = 24 , C = 20 which variable is greater
